Vancouver, WA • 1-866-454-5800

Nashville, TN • 1-800-525-7998

- All structural aluminum members are 6061-T6 alloy aluminum for durability and long life. Provides load capacity of 1000 lbs. per lineal foot. Flatbeds can be built to higher capacity upon request.
- Structural attachments are made with aircraft style mechanical fasteners so parent metal strength is maintained. This allows for no cracking, higher weight carrying capacity and a longer lasting bed.
- Overall weight of aluminum bodies is one-half to two-thirds that of a comparable steel body. That means more payload capacity and higher profit potential, better fuel economy and less wear and tear on your vehicle.
- Aluminum never needs painting and will not rust, resulting in lower maintenance costs and consistent appearance.
- 5" aluminum zee crossmembers increase payload strength and lengthen body life.
- 1¼" x 6" extruded floor standard — optional .188 diamond plate deck, wood deck or our new serrated ridge deck available.
- Flexible dimensions and a wide range of custom capabilities so you get a body built to meet your needs!

BUILD YOUR OWN WILD LAND FIRE BODY!

Pro-Tech applies 20 years of experience with aluminum platform bodies to your new Wild Land Fire Body. Choose the design, boxes and options you need, and we will build to your exact specs.

Options:
